

SECURITY ASSESSMENT AND REMEDIATION

Assess and Develop a Mature Cloud Security Posture

How does your cloud security posture stack up against industry standards? 2nd Watch's Security Assessment and Remediation is an in-depth, hands-on service that evaluates your current cloud infrastructure and processes against 2nd Watch and industry security standards to help you develop a mature cloud security posture. With our service, you can rest assured your data, users and organization are protected.

WHAT YOU GET

- Assessment against the AWS Well Architected Framework security pillar and Azure Security Best Practices
- Full asset inventory and security profiling providing a comprehensive view of cloud infrastructure security posture
- Vulnerability and threat identification and prioritization
- Remediation of security issues found
- Implementation of Identity and Access Management (IAM), Security Groups, Cost Controls, Tagging Policies, Threat Management, Patch Management, Web Application Firewalls and Audit Trail technologies as needed
- Development and implementation of IT security policies and procedures

With the Security Assessment and Remediation you can integrate security into every aspect of your public cloud infrastructure and applications—your solution to data security breaches, maintaining stability and governance while deploying quickly, and adhering to internal and customer-required audits.

OFFER Comprehensive security assessment and targeted remediation through 2nd Watch Cloud Enablement team
