2ND WATCH

DEVOPS TRANSFORMATIONAL SERVICES

Your blueprint to faster, higher-quality application delivery into the cloud

Transforming your software development organization into a more agile and high-performing team includes a major evolution in company culture, automation and technology, procedural and policy development, collaboration, performance measurement systems, and organizational structure—in short, things that cannot be accomplished through automation alone.

2nd Watch helps enterprises transform their software delivery process and allows application development teams to:

Dramatically Increase Velocity	Better Collaborate with Cross-Functional Teams	Improve Software Quality	Increase Implementation of Microservices	Create a Culture of Automated Processes

SOLUTIONS

Every organization's DevOps journey is unique. 2nd Watch has designed several DevOps transformational services to align to your organization's current state and desired progress and goals.

DEVOPS ASSESSMENT & STRATEGY

A blueprint based on your unique strengths, a DevOps Assessment and Strategy shows you where you can deliver software more quickly or frequently, improve your operations and quality (MTTR, MTBF), and enhance your security posture.

- 2-week comprehensive engagement
- Measure your current software development and operations maturity
- Design a strategy for where and how to apply DevOps to accelerate your application delivery while improving operational reliability and security posture

DEVOPS IMPLEMENTATION

Leveraging findings from your DevOps Assessment and Strategy engagement, a DevOps Implementation puts recommendations into action and helps achieve organizational buy-in.

- Prepare a CI/CD pipeline for rapid adoption
- Improve cross-functional collaboration between developers and Operations
- Introduce necessary cultural changes
- Establish personalized key performance metrics (KPI's) based on best practices
- Implement tooling to provide visibility, tracking, and insight

MANAGED DEVOPS CI/CD PIPELINE

A Managed DevOps CI/CD Pipeline automates the build and test process for your multi-tiered applications and manages successful deployment into production, allowing your developers to spend more time writing code while 2nd Watch maintains and manages your CI/CD pipeline.

- Utilize your choice of common code repositories
- Deploy your code into production in a phased approach with 2nd Watch's experienced Cloud Engineers
- Monitor for performance issues

Whether you're just embarking on your DevOps transformational journey, are plateaued in the middle of an implementation, or have already achieved a highly functional and agile CI/CD software delivery system, 2nd Watch allows your organization to experience the most fluid and effective DevOps transformation possible.
