

2ND WATCH MANAGED DATABASE

Your Personal DBA Team

Your database contains some of your company's most valuable assets and information. Proper functionality can have a direct impact on your customer experience and/or application performance, so you are not going to trust managing it to just anyone. However, finding a good Database Administrator (DBA) who can properly maintain and operate your database comes at significant cost, and typically this isn't the same person who is focused on engineering code to leverage the database.

2nd Watch Managed Database resolves these problems for you with a complete team of experienced DBAs and cloud experts focused on your databases and infrastructure, so you can focus on your business.

WHAT IS IT?

2nd Watch Managed Database is a premium service which can be purchased in combination with our Managed Cloud Foundational Services or as a stand-alone service, delivering comprehensive expertise in areas where you may need additional focus. Our team of DBAs have extensive experience running and managing MySQL, Microsoft SQL, and Oracle databases.

WHAT YOU GET

Our Managed Database encompass all the services you would expect from a highly-skilled Database Administrator but are delivered by an entire team, available 24x7x365 and include:

Database health monitoring and troubleshooting

Validate, monitor, and address back-up and recovery issues

Database user management

Database-specific reporting

Parameter performance tuning

Schema updates, database refactoring, and script execution

Capacity planning and management

Redo log management

With 2nd Watch Managed Database you can have confidence that your databases are in good hands, allowing you to focus on growing your business.
