

# Spot Instance and Container Optimization

Cloud workloads at a fraction of the cost of typical cloud infrastructure

Many enterprises using cloud services see higher costs than anticipated due to factors like cloud sprawl/shadow IT, improper allocation of cloud resources, and not using the most efficient resource based on workload. An overall optimization plan is crucial to alleviating these concerns, and now 2nd Watch is taking it a step further.

## SOLUTION

2nd Watch's Spot Instance and Container Optimization service provides you with recommendations for workloads that can take advantage of the cost savings associated with running both Instances / VMs and Containers on spot resources. When compared to traditional cloud IaaS services, spot resources can return huge savings, **up to 90% compared to traditional cloud infrastructure**, that will boost your bottom line.

### Our Cloud Optimization Experts Provide You:

Complete analysis of your cloud account(s) to produce optimization recommendations across our **7 Pillars of Optimization**

**Maximum savings**, taking your current EDP/Savings Plans/RI purchases into consideration

**Full management of resources** (IaaS & Containers) running on spot infrastructure

**Monthly savings reports** specific to spot resource usage

Spot and container optimization **billed on percentage of savings**. If we don't find savings, you don't pay.

Take control of your cloud spend. If you're ready to maximize your cloud savings with spot instance and container optimization, visit [offers.2ndwatch.com/spot-instance-container-optimization-get-started](https://offers.2ndwatch.com/spot-instance-container-optimization-get-started) to begin developing your recovery plan today.
