

2ND WATCH MANAGED SECURITY

A proactive approach to securing your cloud

90% of organizations that fail to control public cloud use will inappropriately share sensitive data. The cost associated with the risks of a cloud misconfiguration is \$148 per exposed record, upward of a combined \$57 billion.

You protect your mission critical systems and data in the cloud. However, with threats evolving so rapidly, you're stretched to do anything more than react. Protecting your company from the ever-changing threat landscape requires an advanced team with experience in securing public clouds and meeting compliance requirements. 2nd Watch has years of experience securing global brands' public and private workloads with a proven approach based on cloud best practices. Using discipline in maintaining strong internal controls surrounding applications, databases, information security, and network monitoring allowed us to become one of the first cloud-native companies to earn cloud SOC2 compliance.

2nd Watch's Managed Security provides a powerful combination of vSOC and MSP services to provide end to end threat management for your business. We continuously fine tune and optimize our tooling to proactively address threats before a security incident occurs.

- **Security Review:** Ensures the proper safeguards are utilized for your multi-cloud environments
 - Single point of contact for your security needs
- **Environment Monitoring:** 24x7x365 monitoring protects against the latest vulnerabilities
- **Threat Analysis:** Managed Reliability Operations Center (ROC) proactively analyzes and provides remediation of potential threats
- **Issue Resolution:** Identified issues are quickly resolved providing enterprise class, proactive defense
 - Vulnerability scanning and Malware protection
 - Multi-source log ingestion
 - We report on only alerts that matter and require attention

2nd Watch delivers a comprehensive suite of security solutions for DevOps teams, CISOs and Security Architects to combat threats from both outside and inside your network. Our multi-cloud Managed Security goes beyond just providing best practice recommendations and guidance to include implementation, deployment, and full management of security devices along with remediation of identified security issues.

2nd Watch Managed Security

 Incident Management	 Security Posture Reviews	 File Integrity Monitoring	 Vulnerability Scanning & Remediation	 Compliance Assessments	 Patch Management
 Virus Scanning & Removal	 Intrusion Detection Services	 Log Correlation & Analysis	 Identity & Access Management	 Threat Assessment	 Application Firewall Management
