GOOGLE CLOUD VM MIGRATION

Build your cloud foundation and meet your business objectives through VM Migration - the faster, less complex entry to cloud

2nd Watch Cloud VM Migration brings you from on premise or cloud virtual machines to Google Cloud optimized for performance, scale and security without business interruptions.

Our migration methodology reduces the complexity within IT operations and provides a comprehensive set of services and tools to assess, design, and migrate either entire data centers or individual workloads to the public cloud. Our services include a predictable schedule and reliable OpEx forecast that come from our unique combination of proven methodologies, certified experts, and patent-pending tools.

GOOGLE CLOUD VM MIGRATION INCLUDES

Assessment of Existing On-Premise or Cloud Landscape	Design and Build of Cloud Foundation	Migrating Virtual Machines (VM) to Cloud	Optimization of Cloud Workloads
Whether your workloads are on premise today or already in the cloud, we'll assess your existing applications, tools and technology, and organization to prepare you fully for the migration effort. Our assessment includes in-depth workshops conducted by our certified architects and engineers, a full analysis of cost of ownership, and a resource optimization plan to keep your cloud spend on target.	Our broad cloud experience empowers you to identify and create your infrastructure modernization roadmap and plan, design an account billing structure, build in identity and access management, establish security policies, and identify networking needs. Working with you, we design and build your full cloud foundational architecture and develop a clear migration schedule for moving your workloads to cloud.	Migrating your applications to cloud includes a migration schedule, capturing and transporting your workloads and data, and post-launch configuration. Our team supports your organization in all phases of cutover and post migration usability testing.	Our team supports your organization in determining a strategy for redesigning legacy application architectures to work better with cloud native services. We spend time reviewing necessary cost data for post-migration rightsizing and cost management.
