

Cloud Modernization Readiness Assessment

Your personalized playbook for migration to the cloud

Moving to the public cloud offers significant benefits but can be a complex and time-consuming endeavor. Deciding how and when to transition your mission-critical applications to this new architecture is essential to optimizing cost and enhancing business agility.

The 2nd Watch Cloud Modernization Readiness Assessment (CMRA) will evaluate your company's IT estate to determine application fitness and optimal migration methodology for your workloads to shed technical debt, improve resiliency, and reduce cost.

Our certified cloud engineers and architects analyze and assess your workloads, tools, and team to determine a detailed plan forward to public cloud. Rather than relying on software outputs alone, our skilled team performs an in-depth technical application assessment and works with your team to develop recommendations for your path to the cloud.

THE CLOUD MODERNIZATION READINESS ASSESSMENT

APPLICATION ASSESSMENT

- In-depth Discovery Workshops & Application Interviews
- Automated Application Discovery
- Dependency Mapping
- Licensing & Compliance Requirements

APPLICATION CATEGORIZATION

- 3 R's: Rehost, Replatform, Refactor
